## Crystal Ultra™ Hybrid

CLOSEST ALTERNATIVE TO NATURAL DENTITION

Crystal Ultra™ and Trilor® are easily bonded together to create a feel that closely resembles natural tooth enamel. This leads to greater functionality and less applied stress on implants.

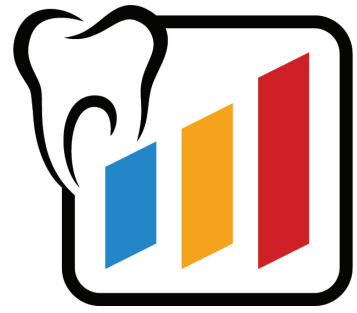

### Shock absorbent, soft bite feels like real teeth

Digital Dental's patent-pending design of the Crystal Ultra™ Hybrid combines Crystal Ultra™ - the strongest, most functional and aesthetic nanoceramic available - with Trilor®, a super strong resin that bends and flexes under stress. This combination results in incredibly durable, beautiful restorations that look and feel like natural dentition, but are actually stronger implant supported dentures.

### Crystal Ultra™ Benefits

- ✓ Highly durable
- ✓ Resistant to chipping
- ✓ Impervious to liquids
- ✓ Simple, efficient fabrication
- ✓ Easily relined chairside
- ✓ Does not require sintering

ADA Codes: Crowns D2740, Inlays D2610-30,  
Onlays D2642-44, Veneers D2962

# Crystal Ultra™

The most functional, aesthetic nanoceramic in the industry with over 5000+ successful use cases.

## Gentle: **60% Lighter than Zirconia**

Crystal Ultra's™ 0.7GPa on the Vickers Hardness scale makes it the only ceramic as gentle as natural dentin; it's gentle, shock absorbing feel closely resembles the experience of natural tooth enamel.

## Durable: **6X Stronger than Acrylic**

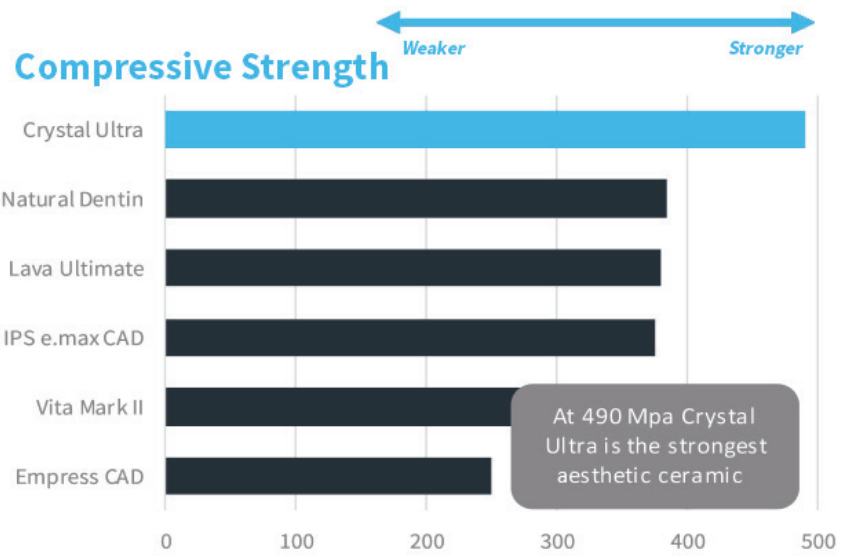

At 490 MPa, Crystal Ultra's™ compressive strength is greater than that of any other nanoceramic; making it the strongest nanoceramic dental material in use for cosmetic, minimally invasive and implant dentistry.

## Shock Absorbing: **Soft Occlusion**

At 10 GPa, Crystal Ultra™ is the most flexible ceramic available on the market and the only ceramic that actually flexes in the mouth, so it won't chip, crack or fracture under stress.

## Adjustable: **Chairside Adjustment and Repair**

Ideally suited for a quick and easy chairside adjustment. Crystal Ultra™ allows for composite chairside repair if a tooth ever chips or cracks due to bruxism. No material is as easy to manipulate in the mouth as Crystal Ultra™.
